

## **HODGDON® H4895® REDUCED RIFLE LOADS**

**For Youth Hunting, Informal Target, and Plinking**

---

Hodgdon Powder Company has found that **H4895** can be loaded to reduced levels. **H4895** was chosen because it is the slowest burning propellant that ignites uniformly in reduced charges. To create reduced loads, the 60% formula is recommended.

Find the **H4895** load in the Reloading Data Center for your caliber and bullet.

Take the *maximum* **H4895** charge listed and multiply by 60% (.6). The load may be adjusted up from there to achieve the desired velocity and accuracy.

This works only where **H4895** is listed. DO NOT use in a cartridge where **H4895** is not shown.

Example: 30-06 cartridge with 125 gr. Sierra SP bullet. Max load shown in the Reloading Data Center with H4895 is 53.7 grains.  $53.7 \times .6 = 32.2$  grains. The shooter begins with this load, and may work up from there to obtain the desired velocity and accuracy for his reduced load.

Call Hodgdon Powder Company if additional information is needed, 913-362-9455.
