Poisons Schedule: Not Applicable
Classification: Explosive Division 1.3, Acute Toxicity (Oral) Category 4, Acute Toxicity (Dermal) Category 4, Acute Toxicity (Inhalation) Category 4, Germ cell mutagenicity Category 2, Carcinogenicity Category 1B, Reproductive Toxicity Category 2, Specific target organ toxicity - repeated exposure Category 2, Chronic Aquatic Hazard Category 2

Legend:

Label elements

Hazard pictogram(s)

Hazard statement(s)

H203 Explosive, fire, blast or projection hazard.

Continued...
H302 | Harmful if swallowed.
H312 | Harmful in contact with skin.
H332 | Harmful if inhaled.
H341 | Suspected of causing genetic defects.
H350 | May cause cancer.
H361 | Suspected of damaging fertility or the unborn child.
H373 | May cause damage to organs through prolonged or repeated exposure.
H411 | Toxic to aquatic life with long lasting effects.

Precautionary statement(s) Prevention
P201 | Obtain special instructions before use.
P210 | Keep away from heat/spark/open flames/explosion surfaces. - No smoking.
P230 | Keep wetted with phlegmizer.
P250 | Do not subject to grinding/shock/sources of friction.
P260 | Do not breathe dust/dust/aspect/vapours/particles.
P271 | Use only outdoors or in the well ventilated area.
P280 | Wear protective gloves/protective clothing/eye protection/face protection.
P281 | Use personal protective equipment as required.
P240 | Ground/respond to container and receiving equipment.

Precautionary statement(s) Response
P301+P330 | IF swallowed or inhaled: Get medical advice/attention.
P363 | Wash-contaminated clothing before use.
P317+P337 | In case of fire: Evacuate area.
P332 | Explosion risk in case of fire.
P337 | DO NOT fight fire when fire reaches explosives.
P391 | Collect spillage.
P301+P313 | IF SWALLOWED: Call a POISON CENTER or doctor/physician if you feel you are unwell.
P302+P352 | IF ON SKIN: Wash with plenty of soap and water.
P304+P340 | IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing.

Precautionary statement(s) Storage
P405 | Store locked up.
P401 | Store according to local regulations for explosives.

Precautionary statement(s) Disposal
P501 | Dispose of contents/container in accordance with local regulations.

SECTION 4 FIRST AID MEASURES

Description of first aid measures

Eye Contact | If this product comes in contact with the eyes:
> Wash out immediately with fresh running water.
> Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids.
> Seek medical attention without delay, if pain persists or recurs seeks medical attention.
> Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.

Skin Contact | If skin or hair contact occurs:
> Immediately flush body and clothes with large amounts of water, using safety shower if available.
> Quickly remove all contaminated clothing, including footwear.
> Wash skin and hair with running water. Continue flushing with water until advised to stop by the Poisons Information Centre.
> Transport to hospital, or doctor.
Inhalation

- If fumes or combustion products are inhaled, remove from contaminated area.
- Lay patient down. Keep warm and rested.
- Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures.
- Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve-mask device, or pocket mask as trained. Perform CPR if necessary.
- Transport to hospital or doctor, without delay.

Ingestion

- IF SWALLOWED, REFER FOR MEDICAL ATTENTION, WHERE POSSIBLE, WITHOUT DELAY.
- For advice, contact a Poisons Information Centre or a doctor.
- Urgent hospital treatment is likely to be needed.
- In the meantime, qualified first aid personnel should treat the patient following observation and employing supportive measures as indicated by the patient’s condition.
- If the services of a medical officer or medical doctor are readily available, the patient should be placed in his/her care and a copy of the SDS should be provided. Further action will be the responsibility of the medical specialist.
- If medical attention is not available on the worksite or surroundings send the patient to a hospital together with a copy of the SDS.

Where medical attention is not immediately available or where the patient is more than 15 minutes from a hospital or unless instructed otherwise:
- INDUCE vomiting with fingers down the back of the throat, ONLY IF CONSCIOUS. Lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration.

NOTE: Wear a protective glove when inducing vomiting by mechanical means.

Indication of any immediate medical attention and special treatment needed

Symptoms of vasodilation and reflex tachycardia may persist following organic nitrate overdose, most organic nitrates are extensively metabolized by hydrolysis to inorganic nitrates. Organic nitrates and nitrates are readily absorbed through the skin, lungs, mucous and gastro-intestinal tract.

Periodic medical examinations, including a complete blood count and liver function tests, are recommended for workers with dinitrotoluene (DNT) exposure.

In male workers DNT metabolites produced as a result of exposure in a single shift are largely excreted in the urine by the beginning of the following shift. Metabolites include dinitrobenzoic acid (52%), 2-amino-4-nitrobenzoic acid (37.2) and dinitrobenzoyl glucuronide (0.5%).

Treat symptomatically.

SECTION 5 FIREFIGHTING MEASURES

Extinguishing media

DANGER: Deliver media remotely.
- For minor fires: Flood with quantities only.
- For large fires: Do not attempt to extinguish.

Special hazards arising from the substrate or mixture

- Avoid contamination with oxidizing agents i.e. nitrates, oxidizing acids, chlorine bleach, pool chlorites etc. as ignition may result.

Advice for firefighters

Fire Fighting

WARNING: EXPLOSIVE MATERIALS / ARTICLES PRESENT!
- Evacuate all personnel and move upwind.
- Prevent re-entry.
- Alert Fire Brigade and tell them location and nature of hazard.
- May be explosively reactive, deliquescent and release much heat.
- Wear full body protective clothing with breathing apparatus.
- Prevent, by any means available, spillage and fire effluent from entering drains or watercourses.
- Fight from safe distances and protected locations.
- Use flooding quantities of water.
- DO NOT approach containers suspected to be hot.

For Division 1.3 Explosives

Evacuation is required in case of emergency.

For quantities of up to:
- 1000 kg, the evacuation distance is 100 metres
- 5000 kg, the evacuation distance is 150 metres
- 20000 kg, the evacuation distance is 200 metres
- 40000 kg, the evacuation distance is 250 metres

Fire/Explosion Hazard

WARNING: EXPLOSION HAZARD!
- Combustible.
- Detonation may occur from heavy impact or excessive heating.
- Mixing with incompatible chemicals may cause explosion, decomposition or detonation.
- Heat affected containers remain hazardous.
- Explosives can supply oxygen for combustion and smouldering action of form or dry chemical may be ineffective.
- Combustion or decomposition produces oxides of nitrogen (NOx), carbon monoxide (CO) and carbon dioxide (CO2).

HAZCHEM: E

SECTION 6 ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures

See section 8

Environmental precautions

See section 12

Methods and material for containment and cleaning up

Minor Spills

WARNING: EXPLOSIVE.
BLAST and/or PROJECTION and/or FIRE HAZARD
- Clean up all spills immediately.
- Avoid inhalation of the material and avoid contact with eyes and skin.
- Wear impervious gloves and safety glasses.
- Remove all ignition sources.
- Use spark-free tools when handling.
- Sweep into non-sparking containers or barrels and moisten with water.
- Place spilled material in clean, sealable, labelled container for disposal.
- Flush area with large amounts of water.

Environmental hazard - contain spillage.

WARNING: EXPLOSIVE
- Clear area of personnel and move upwind.
- Alert Fire Brigade and tell them location and nature of hazard.
- May be violently or explosively reactive.
- Wear full body protective clothing with breathing apparatus.
- Consider evacuation (or protect in place).
- In case of transport accident notify Police, Emergency Authority, Competent Explosives Authority or Manufacturer.
- No smoking, naked lights, heat or ignition sources.
- Increase ventilation.

Environmental hazard - contain spillage.

In the case of transport accident notify the State Police, State Explosives Inspector and the Manufacturer, Thales Multiwala Facility. Collect recoverable packages and segregate from loose, spilled material.

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 HANDLING AND STORAGE

Precautions for safe handling
- Handle gently. Use good occupational work practice.
- Observe manufacturer’s storage and handling recommendations contained within this SDS.
- Avoid all personal contact, including inhalation.
- Avoid smoking, naked lights, heat or ignition sources.
- Explosives must not be mixed with metal implements.
- Avoid mechanical and thermal shock and friction.
- Use in a well ventilated area.
- Avoid contact with incompatible materials.
- Organic powders when finely divided over a range of concentrations regardless of particulate size or shape and suspended in air or some other oxidising medium may form explosive dust-air mixtures and result in a fire or dust explosion (including secondary explosions)
- Minimise airborne dust and eliminate all ignition sources. Keep away from heat, hot surfaces, sparks, and flame.
- Establish good housekeeping practices.
- Remove dust accumulations on a regular basis by vacuuming or gentle sweeping to avoid creating dust clouds.
- Use continuous suction at points of dust generation to capture and minimise the accumulation of dusts. Particular attention should be given to overhead and hidden horizontal surfaces to minimise the probability of a "secondary" explosion. According to NFPA Standard 654, dust layers 1-32 in (0.6 mm) thick can be sufficient to warrant immediate cleaning of the area.
- Do not use air hoses for cleaning.
- Minimise dry sweeping to avoid generation of dust clouds.

Other information
- Store cases in a well ventilated magazine licensed for the appropriate Class, Division and Compatibility Group.
- Rotate stock to prevent ageing. Use on FIFO (first in-first out) basis.
- Observe manufacturer’s storage and handling recommendations contained within this SDS.
- Store in a cool place in original containers.
- Keep containers securely sealed.
- No smoking, naked lights, heat or ignition sources.
- Store in an isolated area away from other materials.
- Keep storage area free of debris, waste and combustibles.

Conditions for safe storage, including any incompatibilities
- All packaging for Class 1 Goods shall be in accordance with the requirements of the relevant Code for the transport of Dangerous Goods.
- Class 1 is unique in that the type of packaging used frequently has a very decisive effect on the hazard and therefore on the assignment to a particular division

Packaging for explosive substances shall meet the test requirements for Packaging Group II. Explosive Code Packing Instruction P114(b) or 114(b)
General packaging provisions of 4.1.1, 4.1.3 and special provision 4.1.5 are to be met.
For UN 0160, 0161 - If outer packaging is 1A2 or 1B2 metal drums then drum construction shall be such that risk of explosion, by reason of increase by internal pressure from internal or external causes, is prevented.
For UN 0077, 0132, 0234, 0335, 0236, packagings are to be lead free, otherwise:
Inner Packaging:
- Damp: Paper Kraft, Plastics, Textiles - silt proof, Woven Plastic - silt proof
- Receptacles: Fibreboard, Metal, Paper, Plastic, Woven Plastic - silt proof
Intermediate Packagings:
- Not necessary
Outer Packaging:
- Boxes: Natural Wood (4C1), Natural Wood - silt proof (4C2), Plywood (4D), Reconstituted Wood (4F), Fibreboard (4G)
- Drums: Steel, Removable Head (1A2), Aluminium, removable head (1B2), Plywood (1B3), Fibre (1C), Plastic, removable head (1H2)
- Packaging as recommended by manufacturer.
- Check containers are clearly labelled.

Suitable container

Storage incompatibility
- Avoid contact with other explosives, pyrotechnics, solvents, adhesives, paints, cleaners and unauthorised metals, plastics, packing equipment and materials.
- Avoid contamination with acids, alkalis, reducing agents, amines and phosphorus.
- Store drums on end and invert them regularly (at least monthly) to avoid separation of the denser liquid. Keep dampened. Do NOT allow to dry.
- Avoid reaction with oxidising agents, bases and strong reducing agents.
- Avoid strong acids, bases.
- Avoid any contamination of this material as it is very reactive and any contamination is potentially hazardous.

**Exposure controls**

Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection.

- The basic types of engineering controls are:
  - Process controls which involve changing the way a job activity or process is done to reduce the risk.
  - Work practices and procedures change and provide a “glove-box” work area.
  - Endorsement and/or isolation of emission source which keeps a selected hazard “physically” away from the worker and ventilation that strategically “adds” and “removes” air in the work environment. Ventilation can remove or dilute an air contaminant if designed properly. The design of a ventilation system must match the particular process and chemical or contaminant in use.
  - Employers may need to use multiple types of controls to prevent employee overexposure.

**Appropriate engineering controls**

- Employees exposed to confirmed human carcinogens should be authorized to do so by the employer, and work in a regulated area.
- Work should be undertaken in an isolated system such as a “glove-box”.
- Engineering controls for explosive substances are designed to reduce or eliminate fragmentation and/or burst effects either by suppression of the source of detonation or by protection at the exposed location, or both. Barricades, shields, contained detonation chambers, and “zero quantity-distance (O-D)” magazines are examples of engineering controls.
- Engineering controls are designed and tested in a rigorous fashion. The construction of the engineering control must be carefully duplicated field applications to assure it will function properly.

It is thus imperative that engineering controls be built exactly in accordance with the design package, and that they are used only for the substances for which they are authorized.

Adequate ventilation should be provided to keep dust concentrations below acceptable exposure limits. Discharge from the ventilation system should comply with applicable air pollution control regulations. Use a local mechanical ventilation system if needed, preferably with explosion proof construction, and with a suitable dust filter installed at inlet to suction piping to the system to prevent accumulation of explosive dust in ventilation piping and blower.

**Personal protection**

- Safety glasses with side shields.
- Chemical goggles.
- Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants, a written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adhesion for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation - lens should be removed in a clean environment only after workers have washed hands thoroughly. [CDC NIOSH Current Intelligence Bulletin 56, AS/NZS 1336 or national equivalent]

**Eye and face protection**

**Skin protection**

See I-hand protection below

**Hands/feet protection**

- Wear chemical protective gloves, e.g. PVC.
- Wear safety footwear or safety gumboots, e.g. Rubber

**Note:**

- The material may produce skin sensitisation in predisposed individuals. Care must be taken, when removing gloves and other protective equipment, to avoid all possible skin contact.
- Contaminated leather items, such as shoes, belts and watch-bands should be removed and destroyed.
- The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer to manufacturer.
- Where the chemical is a preparation of several substances, the resistance of the glove material can be calculated in advance and has therefore to be checked prior to the application.
- The exact break through time for substances has to be obtained from the manufacturer of the protective gloves and has to be observed when making a final choice.

Personal hygiene is a key element of effective hand care. Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly. Application of a non-perfumed moisturiser is recommended.

Suitability and durability of glove type is dependent on usage. Important factors in the selection of gloves include:

- Frequency and duration of contact.
- Chemical resistance of glove material.
- Glove thickness and dexterity.

Select gloves tested to a relevant standard (e.g. EN 374, US F739, AS/NZS 2161.1 or national equivalent).

- Non-sparking or conductive footwear essential. Conductive footwear describes a boot or shoe with a sole made from a conductive compound chemically bound to the bottom components, for permanent control to electrically ground the foot so as to dissipate static electricity from the body to reduce the possibility of ignition of volatile compounds. Electrical resistance must range between 0 to 500,000 ohms. Conductive shoes should be stored in lockers close to the area in which they are worn. Personnel who have been issued conductive footwear should not wear them from...
their place of work to their homes and return.

Body protection
See Other protection below.

- Employees working with confirmed human carcinogens should be provided with, and be required to wear, clean, full body protective clothing (amokle, coveralls, or long-sleeved shirt and pants), shoe covers and gloves prior to entering the regulated area. [AS/NZS 1715 or national equivalent]
- Employees engaged in handling operations involving carcinogens should be provided with, and required to wear and use half-face filter-type respirators with filters for dusts, mists and fumes, or air purifying canisters or cartridges. A respirator affording higher levels of protection may be substituted. [AS/NZS 1715 or national equivalent]
- Emergency deluge showers and eyewash stations, supplied with potable water, should be located near, within sight of, and on the same level with locations where direct exposure is likely.
- Prior to each exit from an area containing confirmed human carcinogens, employees should be required to remove and leave protective clothing and equipment at the point of exit and at the last exit of the day, to place used clothing and equipment in impervious containers at the point of exit for purposes of decontamination or disposal. The contents of such impervious containers must be identified with suitable labels. For maintenance and decontamination activities, authorized employees entering the area should be provided with and required to wear clean, impervious garments, including gloves, boots and continuous-air supplied hood.
- Prior to removing protective garments the employee should undergo decontamination and be required to shower upon removal of the garments and hood.
- For handling explosives or explosive compositions:
  - Wear close-fitting flame-protection treated clothing closed at the neck and sleeves.
  - Cotton underwear, socks and conductive shoes are recommended to avoid human static discharge.
- Manufacture may require:
  - Non-static flame retardant treated clothing
  - Access to deluge Safety shower
  - Barrier cream.

If inhalation risk of exposure to dinitrotoluene (DNT) or trinitrotoluene (TNT) exists, wear air-supplied breathing apparatus. In confined spaces or at elevated temperatures, where mist of fumes are present, an impervious suit ventilate by a supply of clean, dried air may be required.
- Respirators may be necessary when engineering and administrative controls do not adequately prevent exposures.
- The decision to use respiratory protection should be based on professional judgment that takes into account toxicity information, exposure measurement data, and frequency and likelihood of the worker's exposure - ensure users are not subject to high thermal loads which may result in heat stress or distress due to personal protective equipment (powered, positive flow, full face apparatus may be an option).
- Published occupational exposure limits, where they exist, will assist in determining the adequacy of the selected respiratory protection. These may be government mandated or vendor recommended.
- Certified respirators will be useful for protecting workers from inhalation of particulates when properly selected and fit tested as part of a complete respiratory protection program.
- Use approved positive flow mask if significant quantities of dust becomes airborne.
- Try to avoid creating dust conditions.

SECTION 10 STABILITY AND REACTIVITY

Reactivity
See section 7

Chemical stability
Presence of shock and friction
Presence of heat source and ignition source
Product is considered stable under normal handling conditions.
Stable under normal storage conditions.
Hazardous polymerization will not occur.
Avoid contact with other explosives, pyrotechnics, solvents, adhesives, paints, cleaners and unauthorized metals, plastics, packing equipment and materials.
Avoid contamination with acids, alkalis, reducing agents, amines and phosphorus.

Possibility of hazardous reactions
See section 7

Conditions to avoid
See section 7

Incompatible materials
See section 7

Hazardous decomposition products
See section 5

SECTION 11 TOXICOLOGICAL INFORMATION

Information on toxicological effects

Inhalation: Inhaling dusts, generated by the material, during the course of normal handling, may be harmful. Persons with impaired respiratory function, airway diseases and conditions such as emphysema or chronic bronchitis, may incur further disability if excessive concentrations of particulate are inhaled.

If injury to the circulatory or nervous systems has occurred or if kidney damage has been sustained, proper screenings should be conducted on individuals who may be exposed to further risk if handling and use of the material result in excessive exposures.

Ingestion: Accidental ingestion of the material may be harmful; animal experiments indicate that ingestion of less than 150 gram may be fatal or may produce serious damage to the health of the individual.
The substance and/or its metabolites may bind to hemoglobin inhibiting normal uptake of oxygen. This condition, known as “metahemoglobinemia”, is a form of oxygen starvation (anoxia).
Symptoms include cyanosis (a bluish discoloration skin and mucous membranes) and breathing difficulties. Symptoms may not be evident until several hours after exposure.
At about 15% concentration of blood metahemoglobin there is observable cyanosis of the lips, nose and cheeks. Symptoms may be absent although euphoria, flushed face and headache are commonly experienced. At 25-40%, cyanosis is marked but little disability occurs other than that produced on physical exertion. At 40-60%, symptoms include weakness, dizziness, lightheadedness, increasingly severe headache, ataxia, rapid shallow respiration, drowsiness, nausea, vomiting, confusion, lethargy and stupor. Above 60% symptoms include dyspnea, respiratory depression, tachycardia or bradycardia, and convulsions.

Skin Contact: Skin contact with the material may be harmful. Systemic effects may result following absorption.
Open cuts, abraded or irritated skin should not be exposed to this material
Entry into the bloodstream through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects. Examine the skin prior to the use of the material and ensure that any external damage is suitably protected.

Eye: There is some evidence to suggest that this material can cause eye irritation and damage in some persons.

Chronic: Strong evidence exists that this substance may cause irreversible mutations (though not lethal) even following a single exposure.
There is ample evidence that this material can be regarded as being able to cause cancer in humans based on experiments and other information.
Harmful: danger of serious damage to health by prolonged exposure if swallowed.
This material can cause serious damage if it has been inhaled for long periods. It can be assumed that it contains a substance which can produce severe defects.
Animal evidence from experiments exists that there is a suspicion this material directly reduces fertility.
Laboratory (in vitro) and animal studies show, exposure to the material may result in a possible risk of immovable effects, with the possibility of producing mutation.
Substance accumulation, in the human body, may occur and may cause some concern following repeated or long-term occupational exposure.
There is some evidence that inhaling this product is more likely to cause a sensitisation reaction in some persons compared to the general population.
There is limited evidence that, skin contact with this product is more likely to cause a sensitisation reaction in some persons compared to the general population.
Long-term exposure to high dust concentrations may cause changes in lung function i.e. pneumoconiosis, caused by particles less than 0.5 micron penetrating and remaining in the lung.
This material contains a substantial amount of polymer considered to be of low concern. These are classified under having MVEs of between 1000 to 10000 with less than 25% of molecules with MVEs under 1000 and less than 10% under 500, or having a molecular weight average of over 10000.

SECTION 13 DISPOSAL CONSIDERATIONS

Waste treatment methods

- Containers may still present a chemical hazard/danger when empty.
- Return to supplier for reuse/ recycling if possible.
- Otherwise:
  - If container cannot be cleaned sufficiently well to ensure that residuals do not remain, or if the container cannot be used to store the same product, then puncture containers, to prevent re-use, and bury at an authorised landfill.
  - Where possible retain label warnings and SDS and observe all notices pertaining to the product.
  - Legislation addressing waste disposal requirements may differ by country, state and/or territory. Each user must refer to laws operating in their area. In some areas, certain wastes must be treated. A Hierarchy of Controls seems to be common - the user should investigate:
    - Reduction
    - Reuse
    - Recycling
    - Disposal (if all else fails)

  This material may be recycled if unused, or if it has not been contaminated so as to make it unsuitable for its intended use. Shelf life considerations should also be applied in making decisions of this type. Note that properties of a material may change in use, and recycling or reuse may not always be appropriate. In most instances the supplier of the material should be consulted.

  Small quantities of dinitrotoluenes (DNT) may be destroyed by burning, but the operation should be performed by a person competent in destruction of explosives.

  Explosives which are surplus, deteriorated or considered unsafe for transport, storage or use shall be destroyed and the statutory authorities shall be notified.

  Explosives must not be thrown away, buried, discarded or placed with garbage.

  This material may be disposed of by burning or detonation but the operation must be performed under the control of a person competent in the destruction of explosives.

  Disposal by detonation:
  - The explosives to be destroyed must be placed in direct contact with fresh priming charge in a hole which is at least 0.6 metre deep and then adequately stemmed.
  - No detonators shall be inserted into defective explosives.
  - Personnel must be evacuated to a safe distance prior to initiation firing of the charge.

  Disposal by burning:
  - Make a sawdust bed or trial adequate for the quantity of explosives to be burned, approximately 400 mm wide and 40 mm deep, upon which the explosive will be laid.
  - If sawdust is not available, newspaper may be used.
  - Normal precautions shall be taken to avoid the spread of fire.
  - DO NOT allow water from cleaning or process equipment to enter drains.
  - It may be necessary to collect all wash water for treatment before disposal.
  - In all cases disposal to sewer may be subject to local laws and regulations and these should be considered first.
  - Where in doubt contact the responsible authority.

SECTION 14 TRANSPORT INFORMATION

Labels Required

Other Information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.

Definitions and abbreviations

PC — TWA: Permissible Concentration—Time Weighted Average
PC — STEL: Permissible Concentration—Short Term Exposure Limit
IARC: International Agency for Research on Cancer
ACGIH: American Conference of Governmental Industrial Hygienists
STEL: Short Term Exposure Limit
TEEL: Temporary Emergency Exposure Limit
IDLH: Immediately Dangerous to Life or Health Concentrations
User: colour safety factor
NOAEL: No Observed Adverse Effect Level
LOAEL: Lowest Observed Adverse Effect Level
TUC: Threshold Limit Value
L0D: Limit Of Detection
CV: Colour Threshold Value
BCCF: BioConcentration Factors
BEI: Biological Exposure Index

Notes

When the propellent variations AR2205, AR2207, AR2209, AR2209H, AR2208, AR2209, AR2210, AR2219, AR2215V01, AR2210V02, BenchMark 1, BenchMark 2, AR2211, AR2213SC, AR2215, AR2217, AR2225, AR2218 and AR2220 are packed in shipping UN4512/55/-/3A2/RARRE 3081B they are suitable for air transport as follows:
